INTEGRAL SOLUTIONS AT YOUR SERVICE

KNOW US

ABOUT US

We are a company that looks to the future with leadership and focus on the best service, cares about satisfying the needs of its customers by distributing and efficiently providing products and services according to their needs.

OUR MISSION

Our mission is to build the best solution to the identified needs of our clients, attending, primarily, the efficiency of it. For this, we base our task on the union of the individual capacities of our associates, always ensuring the perfect synergy as a result of "Group of cooperative effort", as we like to define ourselves.

OUR VISION

We visualized a scenario in which the market position to our company, as a reference of customized solutions before the needs of obtaining the best management tools.

WHAT WE OFFER?

HIGH QUALITY PRODUCTS AND SERVICES

Since 2011, we offer innovative products and specialize in bringing our customers the most efficient products and services to technological and security needs. Our extensive technical and commercial experience allows us to continue positioning ourselves in the Paraguayan market with strong penetration, both in the public and private sectors, providing innovative and definitive solutions to needs that constantly challenge us to stand out.

OUR VALUES

Our motto is “Commitment to our customers”, commitment fulfilled with the responsibility to always place our best effort in satisfying the needs of our customers.

We consider ourselves as “another department” within the institutions we serve.

BUSINESS AREAS

We work with a wide variety of solutions, which allows us to offer not only specific products but complete solutions, or a combination of products from different areas.

We have a staff of technical specialists who can build technology platforms with a vision of the future, which help our customers to grow and think long-term, adapting to the changing needs of our daily lives

Projects specialized in technology

Our group of specialists in technologies and integration is your competent partner for integration of systems. We offer a wide range of platforms that help in all processes from planning, design and development of solutions to implementation.

- Biometry Modality of Traces, Iris, Voice and Face, with Multi-fusion algorithms.
- Proprietary databases (SQL Server) and open source (MySQL, PostgreSQL both SQL and nonSQL)
- Integration through proprietary technologies, or third parties such as Microsoft Integration Services
- Applications for Android and IOS mobile platforms, and for Windows and Linux PC, in native 32 and 64 bits, with the significant use of existing hardware.

OUR METHODOLOGY OF WORK

Our advice allows us to innovate the software delivery processes, improve the traceability of each component that is built and publish new versions with just one click.

We offer several products that accelerate the deployment of applications to production and improve delivery times. These processes are carried out by qualified personnel, with experience and in constant training.

QUALITY IN PRODUCTION

Quality control is carried out at all stages of production and not only at the end of the processes. This ensures products of excellent quality.

DELIVERY TIME

The current times demand increasingly shorter delivery times. Our platform allows to outline in a few days fully functional solutions

CONCEPTION

A phase plan is made, the main use cases are identified and risks are identified

ELABORATION

A project plan is made, the use cases are completed and the risks are eliminated.

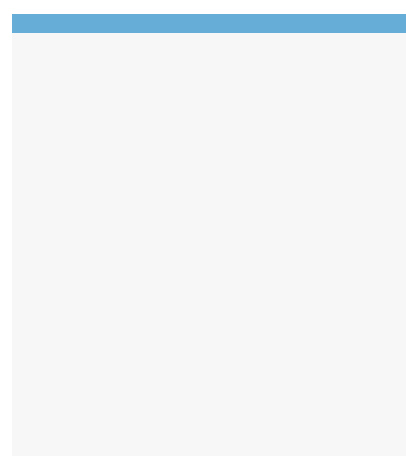

TRANSITION

The product is installed on the client and the users are trained. As a consequence of this, new requirements to be analyzed usually arise.

BUILDING

It focuses on the development of a fully operational and efficient product and user manual.

■ Contabilidad y Finanzas

■ Recursos Humanos y Nóminas

■ Almacén y Logística

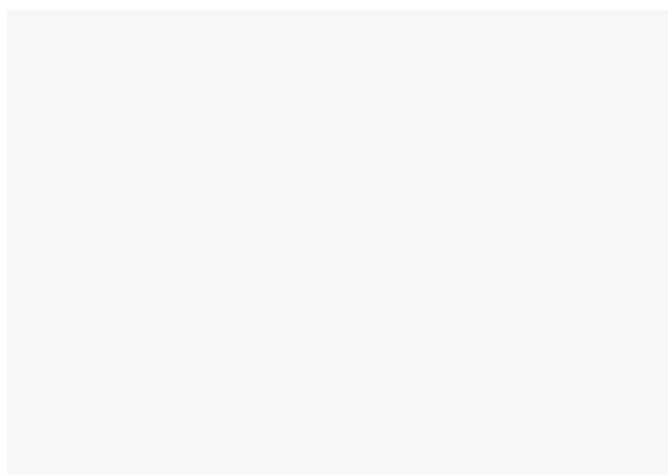

■ Patrimonio

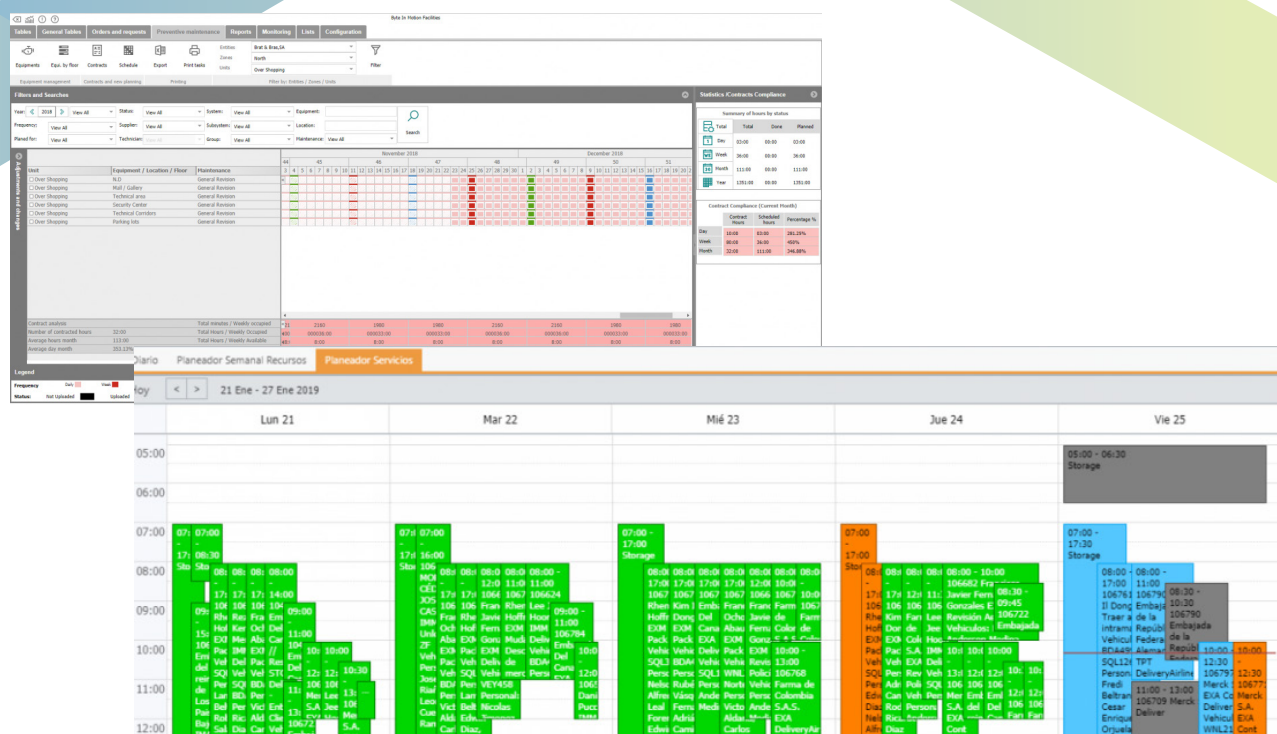

■ Gestión documental y Workflow

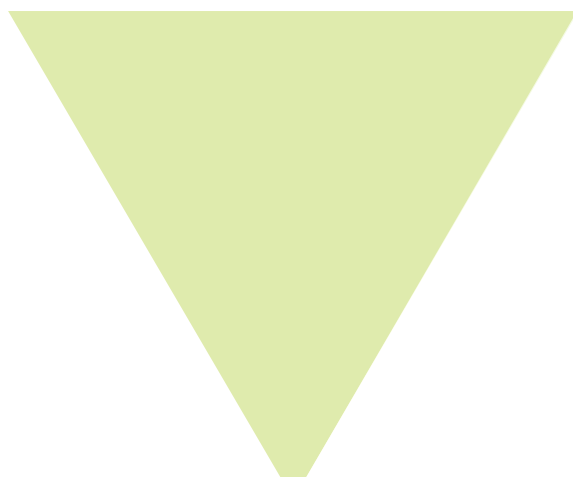

■ Mantenimientos y gestión de tareas

■ Análisis y cuadros de mandos

INTEGRATED WAREHOUSE SYSTEM

SISAL, our platform offers efficient and effective control of the consumable goods of a public or private institution, it is of the utmost importance, the correct handling of purchases and income to the deposits with their subsequent exit, maturities, etc., represents a great financial saving achieving in that way a greater optimization of the resources.

Placing in that way in the hands of the users a powerful tool that meets all the requirements to perform effectively, and efficiently, the necessary controls.

The warehouse system allows a detailed monitoring of the stock of products and their valuations, helping to optimize resources and balancing the availability of inventories, also having indicators on the management of supply chain.

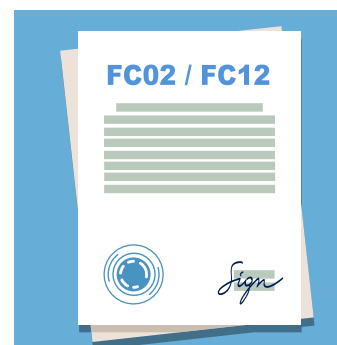

FLEXIBLE AND SCALABLE

Track individual pieces by serial number and lots, either from just a couple of stores to hundreds of branches and regional offices.

SPECIAL HARDWARE

The system is integrated natively to special hardware such as readers and bar code printers, portable collectors and equipment for RFID (labels and arcs), electronic scales.

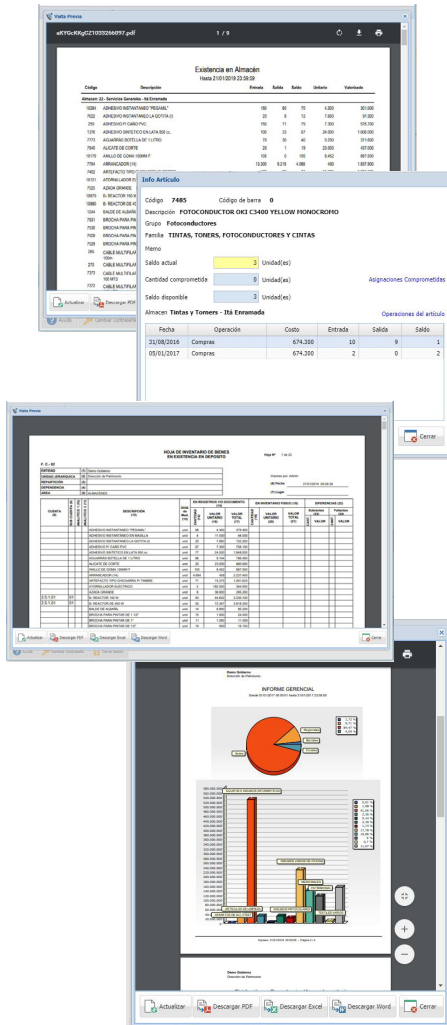

OFFICIAL REPORTS

Generates official reports required by the Ministry of Finance such as FC02, and FC13 in a transparent manner and without additional processes.

HIGHLIGHT FEATURES

GENERAL FUNCTIONALITIES

Allows the classification of articles by Item, Families, Groups, Brands and subsequent generation of reports by these parameters.

Operations for multiple warehouses or warehouses. Transfer between warehouses.

It has batch tracking by due dates.

It has a file of operations with the history of the article heading (entries, exits, distribution or return).

Allows you to record return operations of items to suppliers. Allows you to record item return operations from the dependencies to the warehouse.

STANDARDIZED AND OFFICIAL REPORTS

Standardized stock position reports with predefined parameters by group, family, brand, supplier and official reports in FC02 and FC13 format required by Decree No. 20132/2003.

MANAGEMENT REPORTS

Generates reports of minimum stock, point of replacement and overbought.

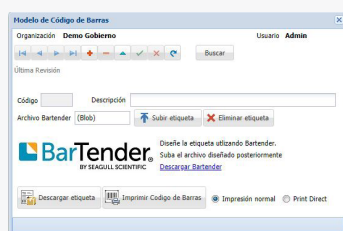

It has alerts and reports of expiration of articles.

It has consumption reports that help organizations to plan purchases of supplies.

Managerial reports with easy-to-understand graphs in decision-making help.

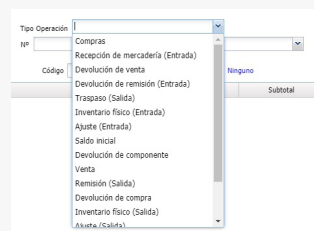

INTEGRATION WITH BARTENDER

■ For barcode label designs

VARIOUS TYPES OF OPERATIONS

■ That adapt to all kinds of needs

LOGISTIC PLAN- NING

■ Optimización de transporte y almacenamiento

INTEGRATED FIXED ASSET CONTROL SYSTEM

In the need to carry out a better control of the patrimonial assets of the organizations, we have developed a robust system that allows to help the organizations to perform with greater efficiency THE ADMINISTRATION OF THEIR ASSETS.

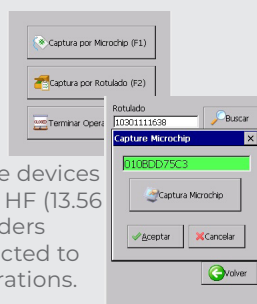

For this purpose, we have integrated an automatic asset identification system with RFID technology, using custom AUTOADHESIVES microchips, which are applied to the assets that, together with the development of an EXCLUSIVE computer system, adjustable to all our clients' requirements, provides accurate and timely information on the situation of heritage assets such as: details of acquisitions, assets in deposit, location of assets, revaluation, depreciation automatically, among many others, allowing for less human interaction in the processes of elaboration of reports, thus avoiding possible human errors and obtaining more time for the realization of administrative controls.

Adjusted to the law

Fully adapted to the Manual of Norms and Procedures for the administration, use, control, custody, classification and Regime of Forms of the Paraguayan State Property. Decree No. 20132/2003.

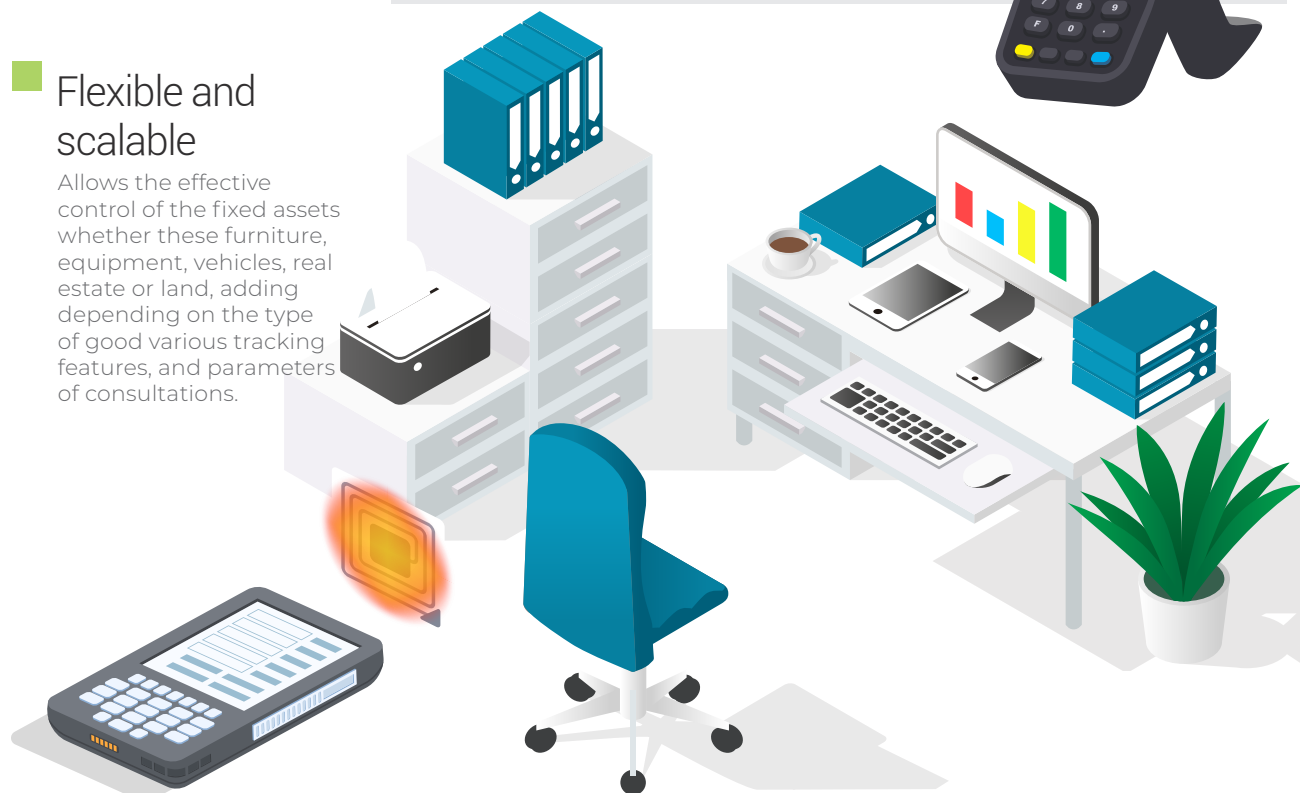

Tecnología RFID

Support for RFID, allowing to use devices of the standards LF (125-134Khz) HF (13.56 Mhz), UHF 868-928Mhz. Our readers have software that is interconnected to the system, allowing online operations.

Flexible and scalable

Allows the effective control of the fixed assets whether these furniture, equipment, vehicles, real estate or land, adding depending on the type of good various tracking features, and parameters of consultations.

HIGHLIGHT FEATURES

Have a file of assets that allows you to consult at any time, this file is automatically updated with the operations performed by users.

The query of goods allows to locate by any parameter or condition, in simple form, the location of good.

The screenshot displays several windows from the SICO system. The 'Consulta Bienes General' window shows a search form with fields for 'Artículo', 'Marca', 'Modelo', 'Serie', and 'Ubicación'. Below the search form is a table of results with columns for 'Codigo', 'Bien', 'Rotulado', 'Descripción', 'Marca', 'Modelo', 'Serie', and 'Id'. The 'Vista Previa' window shows a 'LISTADO GENERAL DE BIENES' report with columns for 'Codigo', 'Bien', 'Rotulado', 'Descripción', 'Marca', 'Modelo', 'Serie', and 'Id'. The 'Detalle de Bienes' window shows a detailed view of a specific asset with fields for 'Codigo', 'Bien', 'Rotulado', 'Descripción', 'Marca', 'Modelo', 'Serie', and 'Id'. The 'SICO - Extensión' window shows a table with columns for 'Año', 'Descripción', 'Rotulado1', and 'Rotulado2'. The 'Revaluación y Depreciación' window shows a table with columns for 'Valor Bien', 'Vida útil', 'Revaluación Ejercicio', 'Salvamento', 'Valor Depreciar', and 'Depreciación del Año'.

Issues all the forms indicated by the **MANUAL OF RULES AND PROCEDURES FOR THE ADMINISTRATION, USE, CONTROL, CUSTODY, CLASSIFICATION AND ACCOUNTING OF THE STATE GOODS** issued by the General Directorate of Public Accounting.

SICO

Migrate to SICO automatically all your operations, avoiding manual loading

REVALUATION AND DEPRECIATION

Automatically generates the processes of revaluation and depreciation of goods, and issues the corresponding reports, such as FC7.1 and FC7.2

The screenshot displays two windows from the SICO system. The 'Revaluación y Depreciación de Bienes' window shows a table with columns for 'Valor Bien', 'Vida útil', 'Revaluación Ejercicio', 'Salvamento', 'Valor Depreciar', and 'Depreciación del Año'. The 'Movimiento Interno de Bienes de Uso' window shows a table with columns for 'Fecha', 'Descripción', 'Valor', and 'Depreciación'.

INTEGRATED SYSTEM OF HUMAN RESOURCES

More than a system, it is an «ALL IN ONE» platform that brings together all the processes of the Human Resources area, from hiring, payroll, and assistance control

Our comprehensive and ideal tool for the administration of Human Resources, which allows the registration of all the data of the officials, including the fingerprints, which integrated to the biometric marking units, allows the obtaining of the details of the hours worked of the personnel for the final liquidation of the salaries.

Docket

Arrange a single database with all personal data, and personnel documents, including scanned files.

Attendance

Manage attendance records obtained directly from your biometric clocks with your alerts of late arrivals and absences, and administer the various types of leave such as holidays, maternity, permits.

Pay

Generate wage settlements, bonuses, overtime including tax calculations and retirement deductions, judicial discounts and associations in a simple way.

GOBIERNO NACIONAL

Poder Ejecutivo

Ministerio de Salud Pública y Bienestar Social

Resolución N° 01/2018

POR LA CUAL SE CONFIRMA EN EL CARGO A FUNCIONARIO DEL MINISTERIO DE SALUD PÚBLICA Y BIENESTAR SOCIAL

Asunción, 06 de septiembre de 2018.

VISTO: El Decreto N° 01, de fecha 10 de agosto de 2018, por el cual se nombra al Doctor Antonio Carlos Barrios Fernández como Ministro de Salud Pública y Bienestar Social y responsable de los recursos humanos, financieros y administrativos.

CONSIDERANDO: Que el Decreto N° 21.750/08, Artículo 20, facultó al Ministro de Salud Pública y Bienestar Social a ejercer la administración de la institución, como Ordenador de Gastos y responsable de los recursos humanos, financieros y administrativos.

POR TANTO, en ejercicio de sus atribuciones legales,

EL MINISTRO DE SALUD PÚBLICA Y BIENESTAR SOCIAL

RESUELVE:

ART.1º: Confirmar en el cargo a funcionario del Ministerio de Salud Pública y Bienestar Social, con vigencia a partir de la fecha de la presente Resolución.

Excmo. ANA VICTORIA FERRERA PALACIOS, C.A.N. I.N.T.A., como Ordenadora de la Dirección de Gestión de Recursos Humanos, dependiente de la Dirección General de Recursos Humanos.

ART.2º: Comunicar, registrar y archivar.

HIGHLIGHT FEATURES

Control of assistance and licenses

Assistance control by importing data from biometric clocks.

Management of medical licenses, paid and unpaid leave, maternity leave, holidays, duels, permission to take courses.

It allows the exception of late arrivals for rainy days.

Manage holidays and holidays.

Generation of multiple shifts
and work schedules.

Issuance of official documents with Qr code

Generation and printing of official documents such as Contracts, Certificates and Work Certificates, Evaluation and Performance Sheets, and optionally embeds a QR code for the tracking and validation of them.

SINARH / MARANGATU

Exports data generated for payment processes to SINARH through CSV.

Generates IRP files for Marangatu avoiding tedious manual processes.

ADDITIONAL APPLICATIONS

The Human Resources platform has complementary applications that allow extending the functionalities. These applications are aimed at users of regional offices, as well as for end users.

Procedures Portal

It is an application that can be included in the institutional website, and allows users to perform online transactions. The design of this component is prepared so that all the tasks are carried out with a step by step assistant, in a simple way. It can include operations for requests for documents such as Work Certificates, Legajos, Assistance queries, as well as data rectifications, requests for Schedule Changes, minimizing with this the need for the transfer of personnel to the Central Office for the realization of said formalities.

The screenshot shows a web browser window with the URL localhost:8079. The page is titled 'Portal de Trámites' and 'Versión 2.8.31'. It displays a process flow with four steps: 1. Seleccione personal, 2. Seleccione vínculo, 3. Nueva Antigüedad, and 4. Comprobante. The user is currently on step 1, where they have selected 'GONZALEZ SANABRIA, PATRICIA VICTORIA' as the personnel and 'Contratado' as the link. The page also shows details about the user's current position and the process flow.

Self-service

The self-service of a set of applications for the staff of the institution so that it can perform various operations, such as consultation of wage settlements, assistance queries and files. These tools eliminate the queues of attention for repetitive tasks, and allows the institution to have a 24-hour consultation service, 365 days a year. It is available in three different versions

1

Standalone application for terminals self-consultation

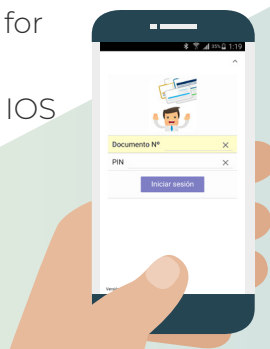

2

Web to embed in the institutional website

The screenshot shows a web browser window with the URL 'AutoservicioWeb Versión 2.7.0'. The user is logged in as 'JUAN CARLOS ALVARENGA PRINCIGALLI'. The page displays the 'Última liquidación' (Last liquidation) for the period of 'Diciembre/2018'. It shows a table with liquidation details, including the concept, type, location, and amount. The total amount to be paid is '11.809.333'.

3

Applications for phones with Android and IOS

The screenshot shows the self-service app interface on a smartphone. The user is logged in as 'VICTORIA MORENO DE GOMEZ'. The page displays the 'Última liquidación' (Last liquidation) for the period of 'mayo/2015'. It shows a table with liquidation details, including the concept, amount, type, and location. The total amount to be paid is '2.969.285'.

The screenshot shows the self-service app interface on a tablet. The user is logged in as 'JUAN JOE GONZALEZ BLACK'. The page displays the 'Última liquidación' (Last liquidation) for the period of 'julio/2015'. It shows a table with liquidation details, including the concept, amount, type, and location. The total amount to be paid is '11.809.333'.

DOCUMENT MANAGEMENT SYSTEM AND WORKFLOW

The amount of information generated by current organizations grows exponentially and old storage systems have too many gaps. A document management system ensures organized and efficient information that promotes productivity.

Workflow is about the automation of business processes in which documents, information and tasks pass from one official to another, following a certain hierarchy and according to a set of rules.

Our Document Management and Workflow solution simplifies the management of large volumes of documents, allowing detailed monitoring, including deadline expiration alerts, and even allowing the appellant to consult the status of the file on the institutional website.

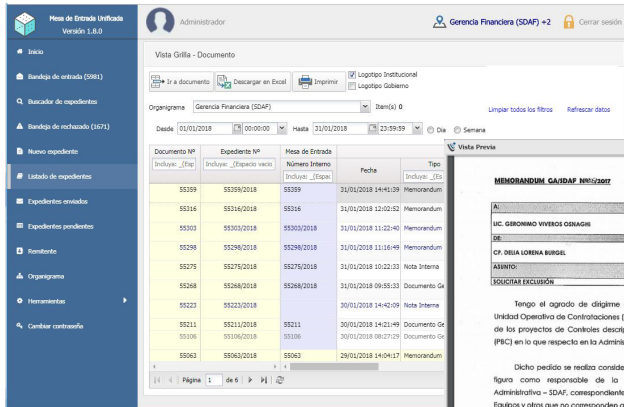

Entry of documents

Supports the creation of a standardized table of entry for documents, regardless of the number of regional and departmental offices, avoiding document losses, offering file traceability.

HIGHLIGHT FEATURES

Allow to manage the complete life cycle of documents and records of the institution.

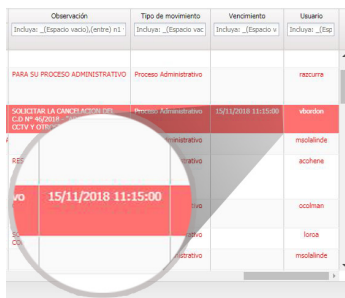

Have attachment features scanned documents.

Allow connect directly to scanners using TWAIN, or high-volume scanners using FTP.

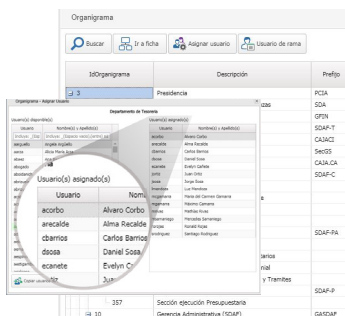

Have automatic functions for processing scanned documents, such as Detecting and straightening documents, cleaning stains, improvements and color correction to facilitate reading.

OCR Optical recognition of characters, and subsequent indexing, for further searches.

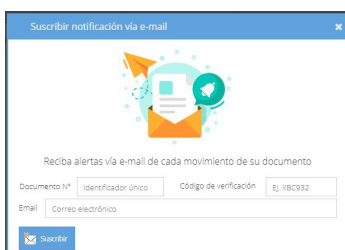

Document deadlines alerts

Granular access to documents, thus allowing documents to be accessed only by users who have permission.

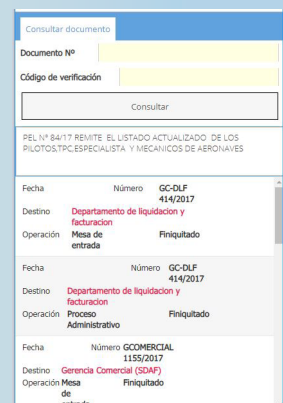

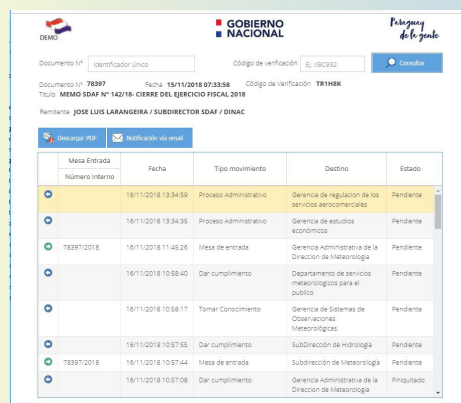

Receive notifications by email, of every movement of the document.

Track the file via the internet.

The system generates a receipt with a Qrcode, and a verification code, for each file, this data can be used by the appellant to track the status of the document.

HOSPITAL MANAGEMENT SYSTEM

Our HIS platform is a modern tool that allows the management of hospital patients, and the human resources of the medical area as administrative, including laboratories.

It has several features such as communication with other platforms using the HL7 standard or directly capture images in the patient file using the DICOM standard.

The patient's medical history is accessible from anywhere (health centers, mobile, internet), always complying with the information security regulations. All this results in a higher quality of care.

PLANNING AND FINANCIAL MANAGEMENT

Allow cost tracking at all levels since the imputation of sanitary material, pharmaceutical, equipment, use of facilities, etc. is registered in the system, at the highest level of detail

HUMAN RESOURCES MANAGEMENT

Module of shifts and guards, which allows to size the template in a flexible way depending on the demand.

UNIFIED CLINICAL HISTORY

Through an institutional web portal or app in which the patient can consult information about their own clinical history and interact with the doctors who follow the pathology..

SOME MODULES AND FUNCTIONALITIES

Medical history

Work accidents, food allergy, general allergy, drug allergy, infection control, current illness, concern, Familiogram, gastroenterology, childbirth, pediatrics, rheumatology, vital signs, trauma, emergencies, proctology.

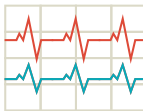

Laboratory

Allow to determine several laboratories and establish routines and profiles.

Reception and management of orders in Laboratory.

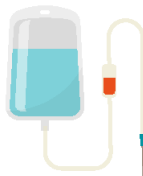

Issuance of results vouchers.

Label impressions and reports as required

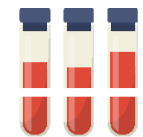

Exams

Doppler Echocardiogram, Electrocardiogram, Ergometry, Puncture studies.

Treatments and surgical practices

Surgical part, Instrumentation part, Preoperative, Vascular risk, Surgical safety, Operating room request.

blood bank

Type of donation (autologo, eventual, loyalized, etc.).

Donated product and blood products.

Product traceability

Bank balance, and donor replacement balance.

Treatments

Care and measurements, Day Hospital, Kinesiology, pathology anatomy samples, Nephrology, Hospital nutrition, Dentistry, Fall prevention, Vaccination.

SISTEMA DE GESTION DE TURNOS Y COLAS

El sistema de gestión de turnos permite optimizar las colas que se puedan crear en los distintos servicios que presta su organización, organizando de esta manera los turnos y la atención dada a las personas y organizaciones que concurren a realizar un trámite, consulta, u obtener información.

Las colas y esperas excesivas están entre las principales insatisfacciones en todas las organizaciones, ya sean tiendas, hospitales e instituciones gubernamentales. Nuestras soluciones tecnológicas permiten ayudar a mejorar el flujo en las atenciones y administrar filas con soluciones de colas lineales y virtuales, pantallas de señalización, gestión de turnos, aplicaciones de filas y turnos para teléfonos móviles, que funcionan de manera integrada sobre una plataforma sólida de software.

MEJORA DEL NIVEL DE SERVICIO

Al organizar los turnos de los recurrentes de forma clara y precisa se reduce la percepción del tiempo de espera que puedan tener algunas personas, proporcionándoles un orden y una sensación de servicio ordenado.

COMUNICACIÓN DE IMPACTO

Con el sistema de gestión de filas, además de proporcionar los turnos a sus pacientes, puede programar mensajes y/o campañas publicitarias con las que podrá ofrecer un mensaje a las personas, mientras se esperan.

ESTADÍSTICAS Y REPORTES

Genera estadísticas y métricas en tiempo real por operador y mesa de servicio, por periodos de espera y tiempo de atención, por total de tickets atendidos, cancelados, desviados y en espera, entre otros.

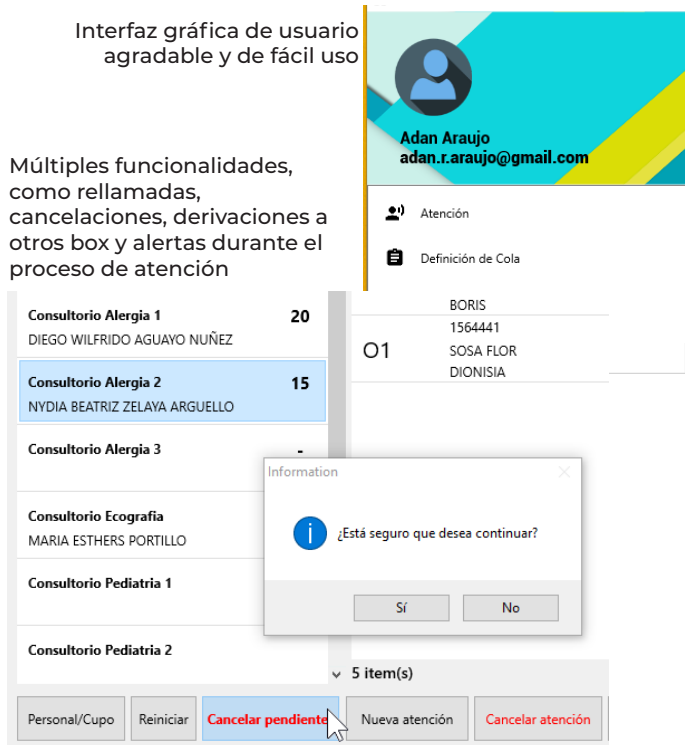

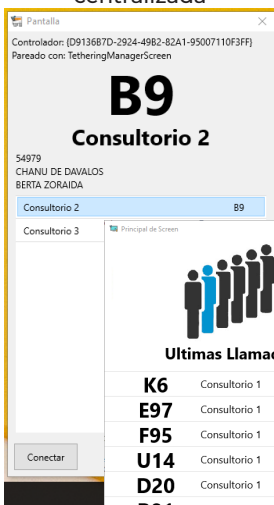

ALGUNOS MODULOS Y FUNCIONALIDADES

Interfaz gráfica de usuario agradable y de fácil uso

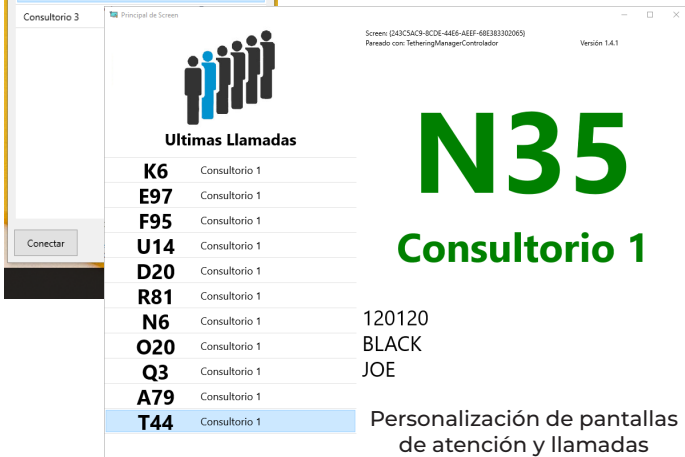

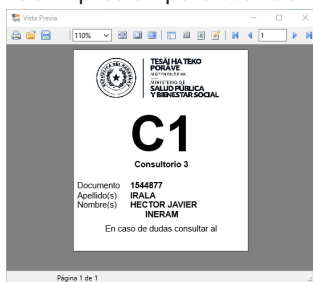

Múltiples funcionalidades, como rellamadas, cancelaciones, derivaciones a otros box y alertas durante el proceso de atención

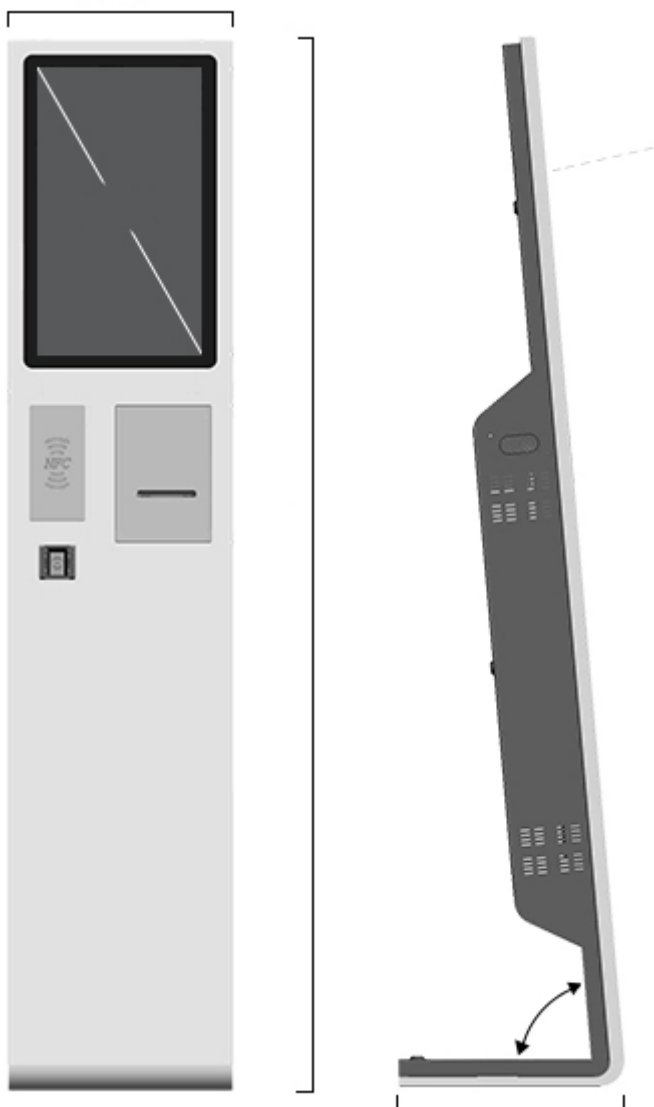

Agente de atención tipo popup, autoinstalable y actualizable de manera centralizada

Personalización de los tickets de impresión para atención

Personalización de pantallas de atención y llamadas

 Atención General	 Trámites / Pagos	 Otros trámites
	 Licitaciones	 Consultas varias

Tenga un sistema de gestión de colas móvil integrado para minimizar los tiempos de espera, y simplificar su flujo de personas, mediante la opción de unirse a una cola antes de llegar físicamente a sus instalaciones..

Es una aplicación para smartphone, que permite obtener un turno de fila, ya sea para un servicio determinado, una sucursal, oficina, o punto de atención de acuerdo a las configuraciones. Los usuarios pueden obtener un turno remoto, mientras continúan sus actividades, y ver la información del avance de la cola en tiempo real.

- Asigna números de ticket usando un smartphone, permitiendo penalizar a las personas que realizan turnos y no acudiendo a la cita
- La aplicación muestra alertas una vez que toca su número
- Notificaciones via Push Notification o vía email

SCANNING OF DOCUMENTS

The growing demand for document searches and each greater number of papers requires an integral solution to the problem: DIGITALIZATION OF FILES.

The management of digitized files aims to make working with documents easier, so that a person knows what documents to keep, when, how and where, in order to locate them when needed.

- Allow to generate a database of digitized documents as a tool to support the institution's management.

- Reduction of paper transfer.

- Help unify the processes of scanning documents.

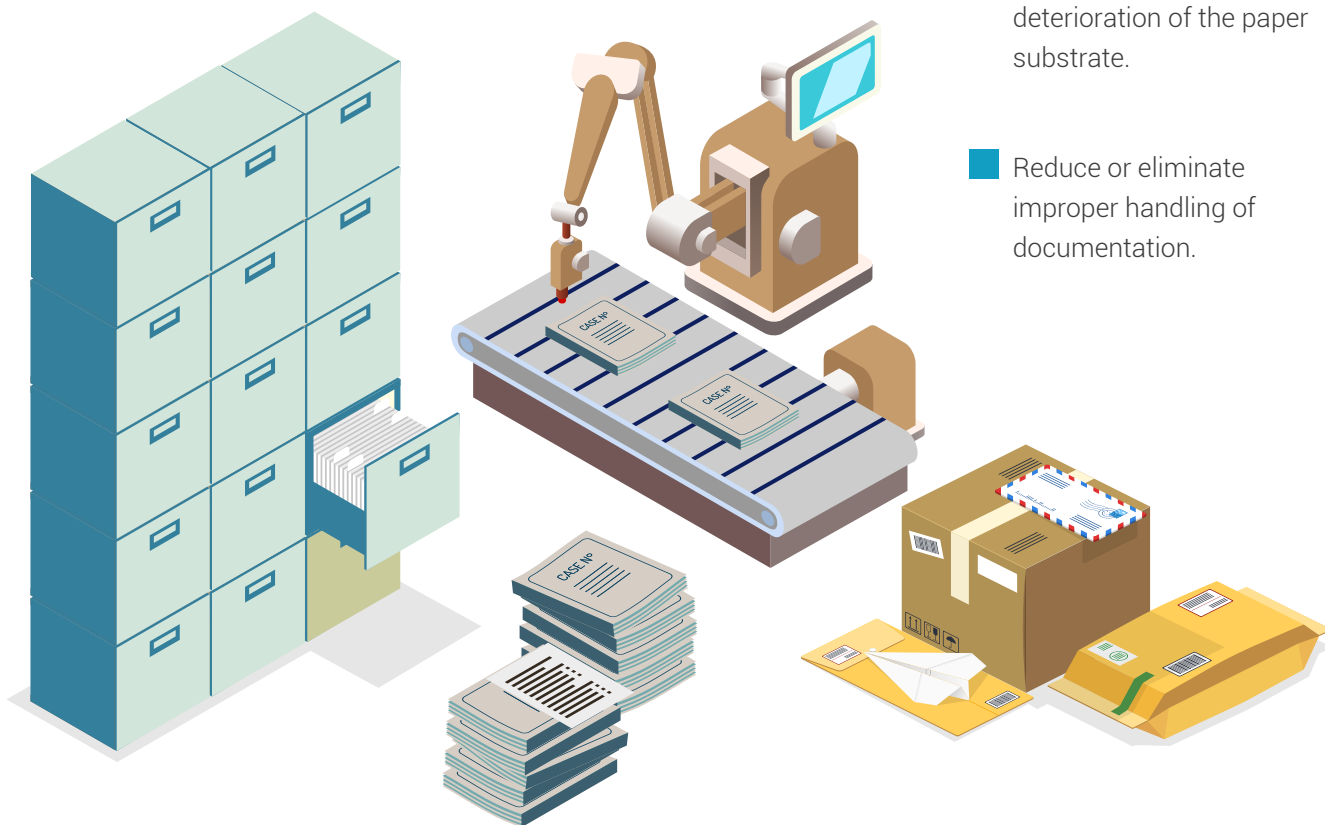

- Facilitate the integration of the digitized document database with other institutional systems.

- Help to complete the existing regulations.

- Allow easy accessibility and use of information.

- Minimize the loss of information due to the deterioration of the paper substrate.

- Reduce or eliminate improper handling of documentation.

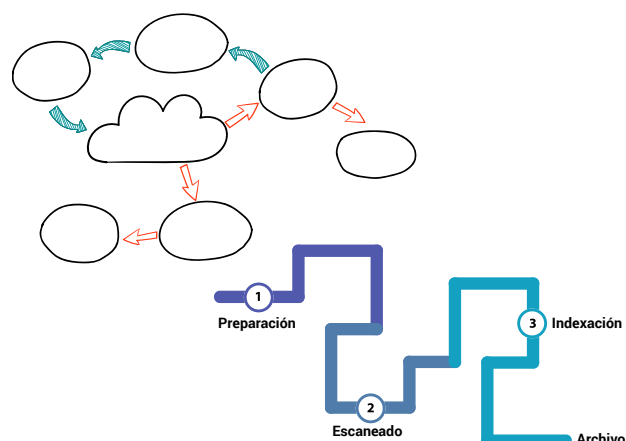

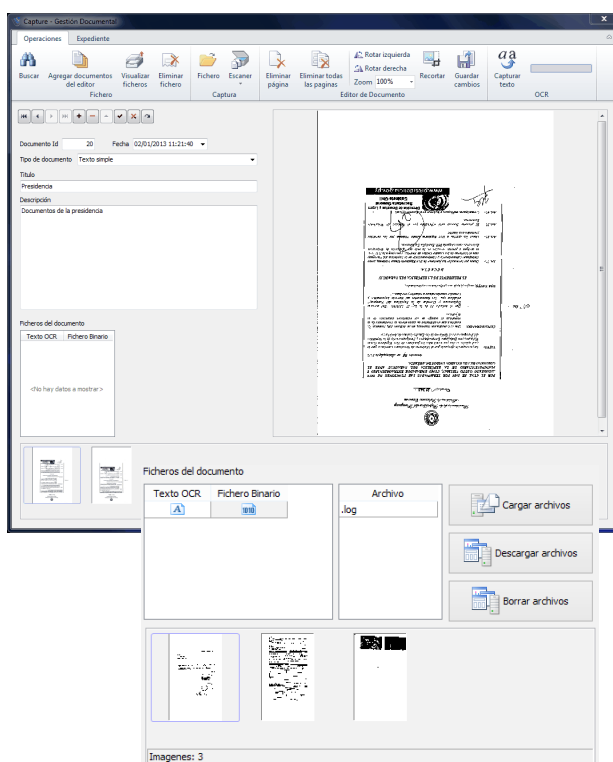

OUR SERVICE

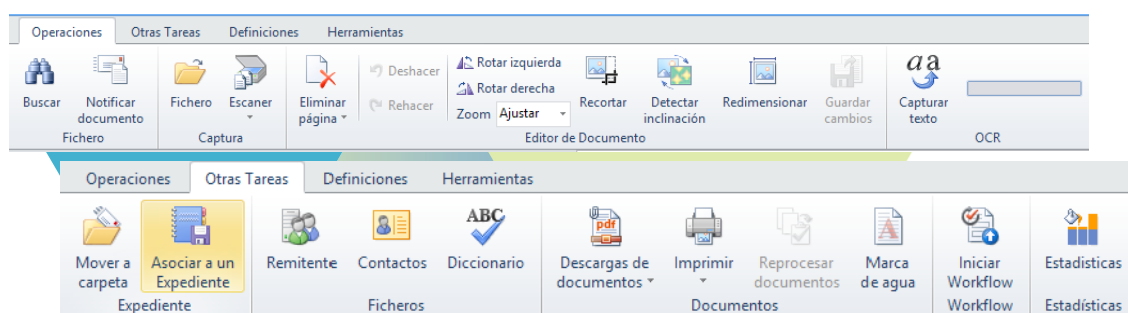

We offer a complete solution of Digitalization of Files, since the fact of only digitizing, implies the change of a physical warehouse of papers, to a digital warehouse of papers, and does not mean an improvement in the processes of the institution.

The digitization process must be preceded by a series of procedures and accompanied by a platform that allows the optimal use of digital files.

Our platform allows not only the capture of documents, but also the Optical Character Recognition (OCR), indexing of files, conversion to portable files of documents (PDF), for subsequent searches by users.

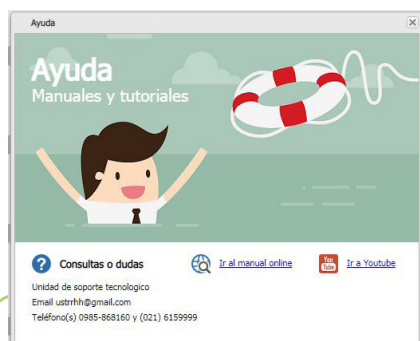

Our own development tools allow you to capture and process large volumes of data, improve scanned documents, add metadata as Expediers and even start a Workflow process.

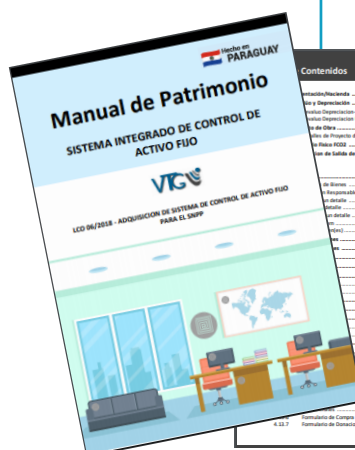

HIGH ADDED VALUE

Every new software implementation requires a large amount of support to users, as well as aids and manuals. Our systems include a series of added values and services that help achieve success in each implementation.

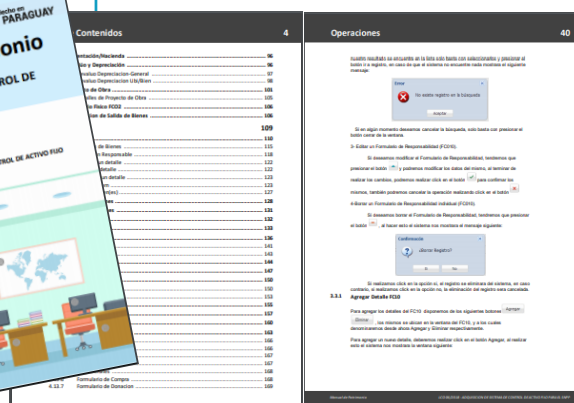

- Telephones and contact to help desk
- Link to manuals

Online help

User manuals
(PDF and HTML online)

DEPLOYMENT AND DEPLOYMENT

We have a trained technical team to help our clients achieve absolute quality in the implementation process. Our technicians are responsible for conducting group or individual training, as well as a period of accompaniment to users, to clear up doubts in the use of our systems.

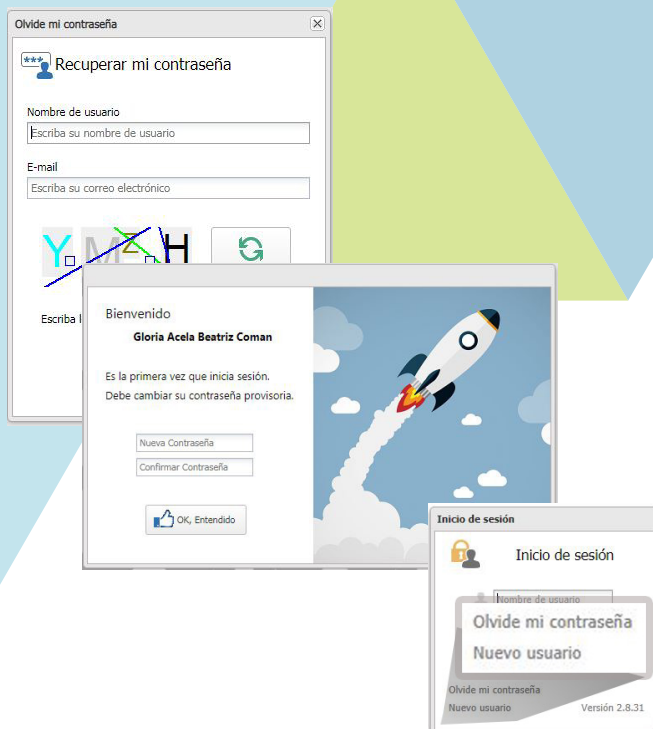

The implementers are also responsible for monitoring the performance of the systems once installed, during the start-up process and eventually notify the developers of possible incidents, so that the latter can make adjustments if necessary, or request the Datacenter system administrators modify or adjust parameters in the infrastructure to achieve a usability of the software platform.

“ Looks like a desktop application, but it's 100% Web

Our applications are designed to take advantage of HTML5 features, compatible with the most popular browsers, such as Chrome, Mozilla, Edge, Safari, Opera.

Thanks to AJAX technology, they run in the browser while maintaining asynchronous communication with the server, thus allowing multiple pop-up windows to be viewed, with several tasks at the same time (it is not necessary to refresh the entire application), which help productivity of users, it also has a much higher performance than traditional SPA web applications, thanks to the fact that it does not need to completely reload the pages, but only the required data.

This feature allows IT managers and system administrators of institutions to deploy systems on several hundred computers at the same time, since it does not require an individual installation. The deployment is available as an Independent Application, Windows Service or as an IIS or Apache module.

SELF-MANAGEMENT CHARACTERISTICS

This includes a set of features that allow users to notify their account creation, recover a password in case of loss, register new users using forms, this allows end users to perform these operations without having to resort to IT administrators, freeing them of this additional task.

With this the IT staff can have their time to other tasks.

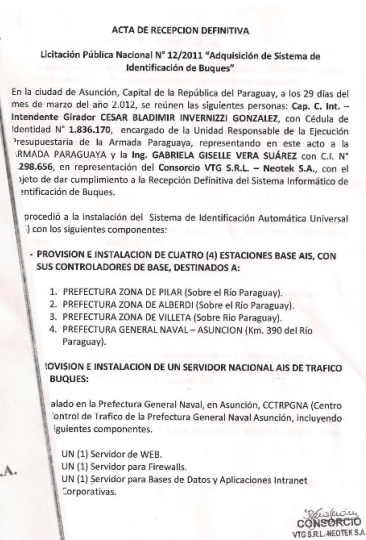

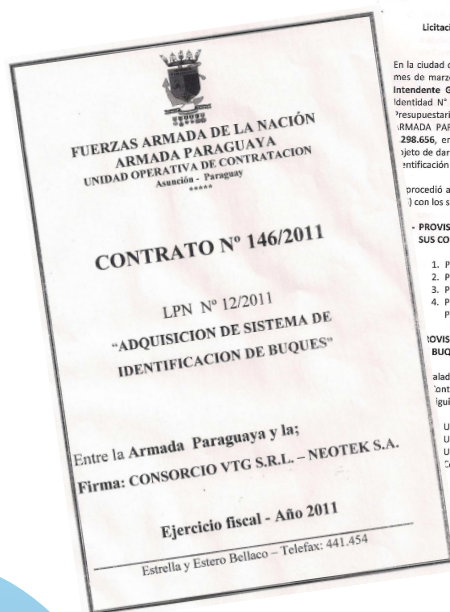

SUCCESS STORIES

Paraguayan Navy

National Network - Vessel Identification System

VTG, associated with Transas, a world leader in the provision of solutions for the maritime area and area, has implemented a solution for the management of fluvial traffic, with compliance with high military standards of quality, data encryption and security, for the monitoring of the navigation of the Paraguay river using AIS systems, in this way the country improves the navigability conditions of the Paraguay River, considered the nerve center of the Waterway and the main means of exit for Paraguayan exports, and a mandatory route for commercial traffic in the region.

Transas offers technologically advanced solutions for maritime security services; shipping companies and maritime operators; Coast Guard and Armed Forces; educational and training centers; port administrations; authorities and government, municipal and local administrations; environmental services and institutions, as well as OEM partners.

El Gobierno aplica sistema de control digital en río Paraguay

El objetivo principal es combatir el ingreso de buques con mercaderías ilegales al país, a través del río. La primera etapa abarca desde

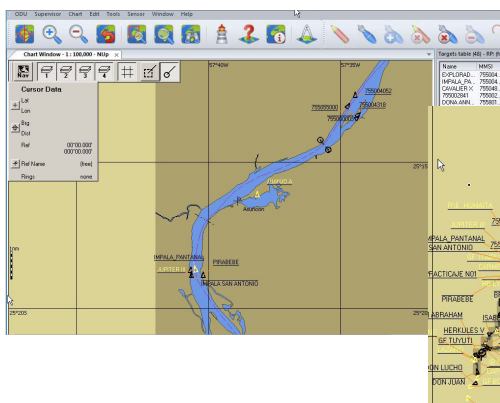

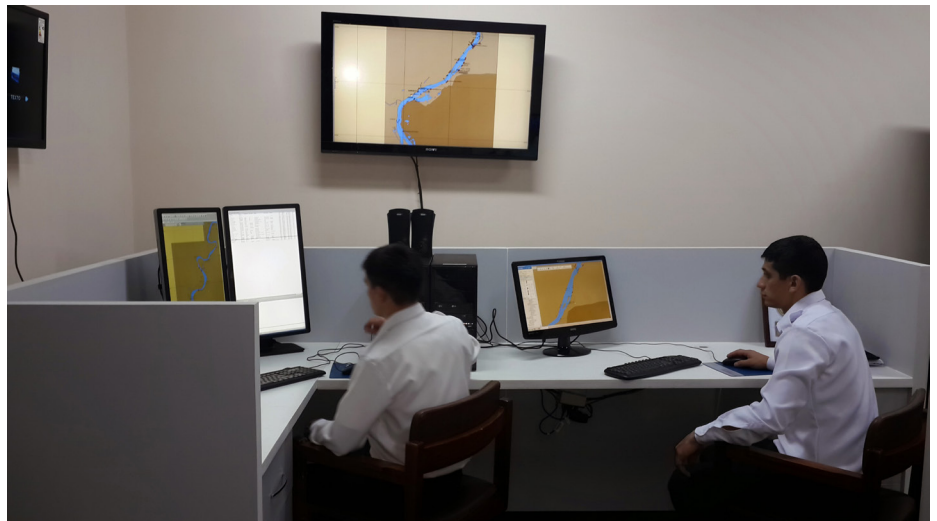

2000 km

Paraguay River

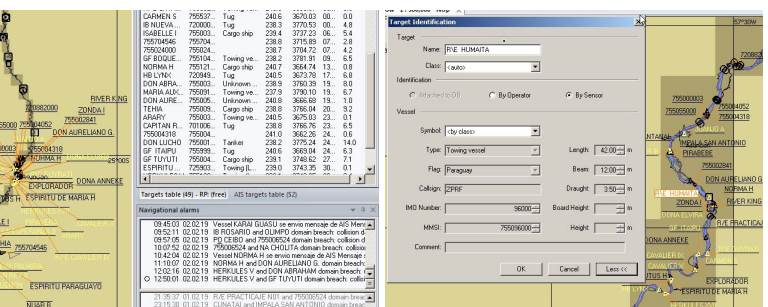

Covered in totality thanks to 9 base stations installed strategically, Bahía Negra, Fuerte Olimpo, Isla Margarita, Vallemi, Concepción, Rosario, Asunción, Villeta, Alberdi and Pilar

Traffic control offices, where officers and trained non-commissioned officers operate the AIS network.

Real-time monitoring software, vessel queries, and navigation history.

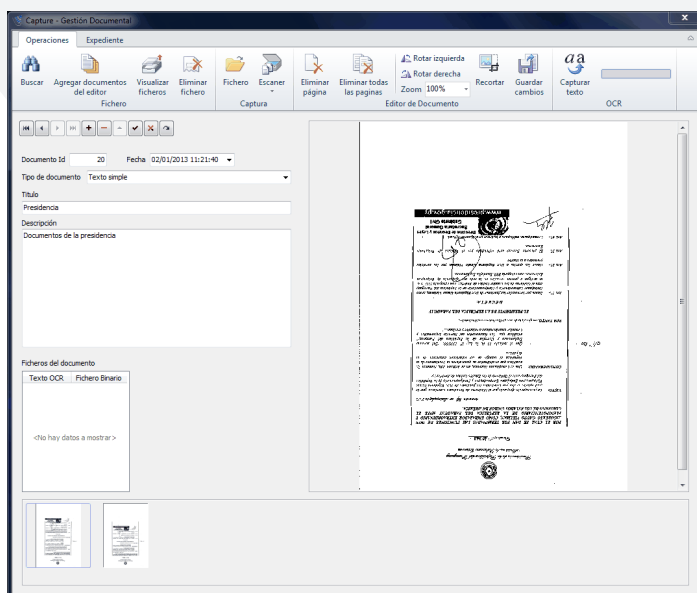

SUCCESS STORIES

National Congress

Documentation and Workflow Management System

The increasing amount of documents and difficulty in locating them quickly was the main requirement of the National Congress, through the Document Management system and Workflow could improve the response processes to documents, through scanning, processing, optical character recognition and automatic indexing thereof.

The workflow module allows flexible definition of workflows to minimize response times to documents managed by the institution.

For a better distribution of tasks, three large instances have been deployed.

- Administration and Finance Department, for all administrative processes.
- Congress entry desk. Destined to all the missionary processes of the National Congress.
- Presidency of the Congress. Destined to the management of files of the legislative work of the president.
- Congress Retirement Fund. Destined to the internal processes of the box.

SUCCESS STORIES

Public ministry Integrated Warehouse System

This project allowed the Public Ministry to manage and manage the goods and consumables supplied throughout the republic for both the Regional, District and Metropolitan Prosecutor's Offices, as well as the technical, logistical, forensic and administrative support offices.

The system helped to minimize the delivery times of the supplies, also to control the series and batches of maturities for chemical, medicinal products with enormous cost savings.

With the statistical reports of consumption it also allowed to plan the consumption in the future and make the best use of budgets for purchases of goods and supplies.

SUCCESS STORIES

Municipality of Pedro Juan Caballero

System of Issuance and Management of Records, with provision of inputs, and equipment in leasing mode.

This municipality has reduced its production times of Vehicle Patents and Driver Licenses thanks to a joint system which includes the provision of inputs, equipment and software leasing, thus allowing it to concentrate on the taxpayer's attention and precious time. the time to perform these procedures.

To guarantee a transparent and optimal workflow, and to guarantee the security of the data, an interface has been set up to capture the taxpayer's data.

Warehouse System with specialized Tablet for inventory management and Heritage Systems with RFID Microchip and specialized data capture equipment

The DINAC has opted for VTG for the migration and updating of old desktop systems, in many cases with patches for operation and not meeting all the requirements required by the airports of the country, for this to opted for the Web platform thus uniting over its VPN (Virtual Private Network) to all airports and all the dependencies of the institution on a single platform to meet their demands for the management of inputs.

As for the Heritage system, it has been provided with a system that complies with all the requirements of Decree 20132/2003 for asset management, with a RFID Microchip attached to each asset, thus minimizing efforts to control assets. minimize costs and save the time and travel of officials of the Department of Heritage.

Navegistic

Simulator presentation in Paraguay

VTG and Transas have participated in the International Navigation and Logistics Fair in Paraguay - Navegistic, obtaining the first Silver STAND Award.

For this purpose, we have deployed a navigation simulator so that the local industry can appreciate the advantages for the training of the crews of the fleet of removers that cross the Paraguay river.

06 DE SETIEMBRE DE 2013 | HASTA HOY EN EL CENTRO DE CONVENCIONES MARISCAL LÓPEZ

Feria muestra las novedades del sector naviero y logístico

Un simulador de navegación, una nueva carrera de técnico en construcción naval y un servicio de urgencia 24 horas para embarcaciones son algunas de las novedades que pueden encontrarse en Navegistic, feria que puede visitarse hasta hoy en los salones del Centro de Convenciones Mariscal López de 15:00 a 21:00.

Un simulador de navegación de la empresa VTG SRL es una de las novedades en Navegistic. / ABC Color

Ministry of Public Health and Social Welfare Integrated Human Resources Systems

We have developed an integrated platform that allows the management of the institution's personnel in a transparent, agile and simple manner,

It has several subsystems and in turn each of them has several modules, which are accessed by users depending on their profile.

It covers a wide spectrum of operational tasks, reducing their time, with a guarantee of reliability and safety.

Generates real-time reports accurately.

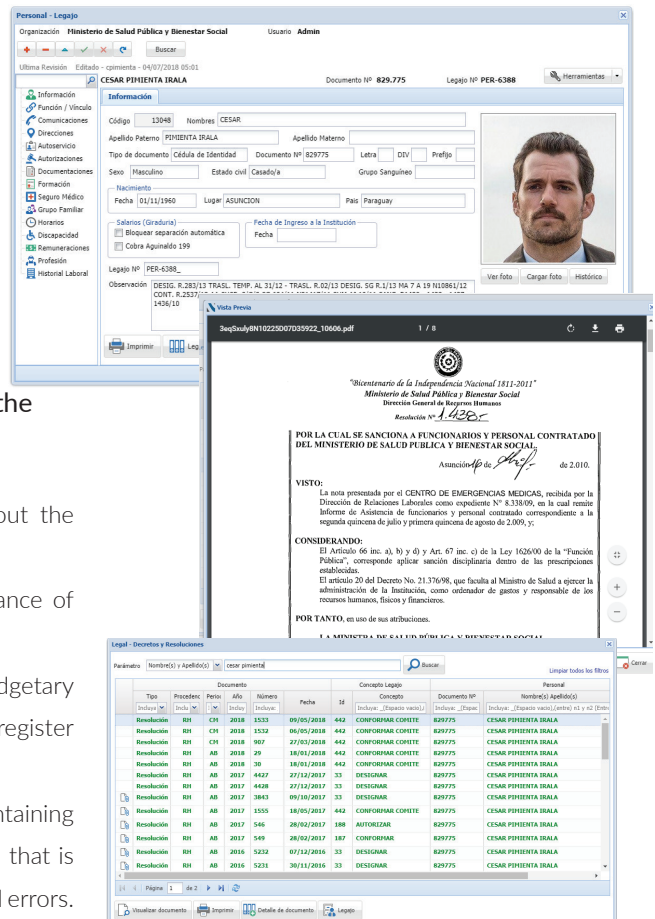

It offers reliability, since the system is built using a database engine that has Security, Audit and Redundancy characteristics.

Savings of more than 30.000.000.000

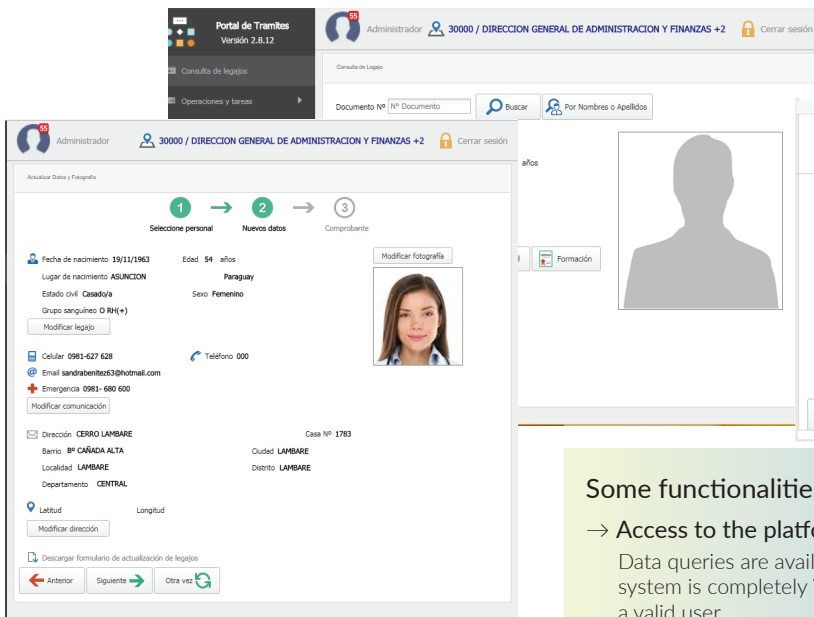

Complete press release on the official website of the institution
<https://www.mspps.gov.py/portal/15729/sistema-integrado-de-gestion-control-e-informacion-a-un-solo-clic.html>

BackOffice / Nómina Powerful administration tool

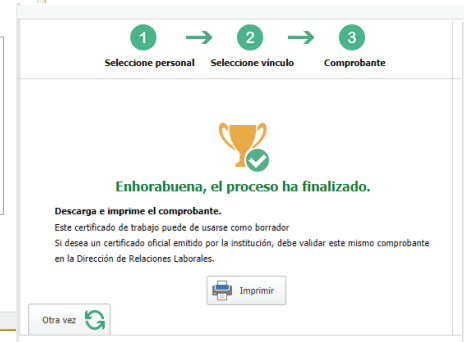

Improvements obtained since the implementation of the system

- Less time involved in information processing
- Reduced travel costs of personnel distributed throughout the country
- Accuracy during information processing and in the issuance of reports.
- Reduction of costs and time, minimizing the amount of budgetary resources allocated to overtime and additional hours used to register the files, expdientes, and various processes of the institution.
- Simple and centralized administration, avoiding maintaining multiple files and data sources that can provide information that is inconsistent, confusing and with the possibility of unintentional errors.

Simplify processes and reduce costs

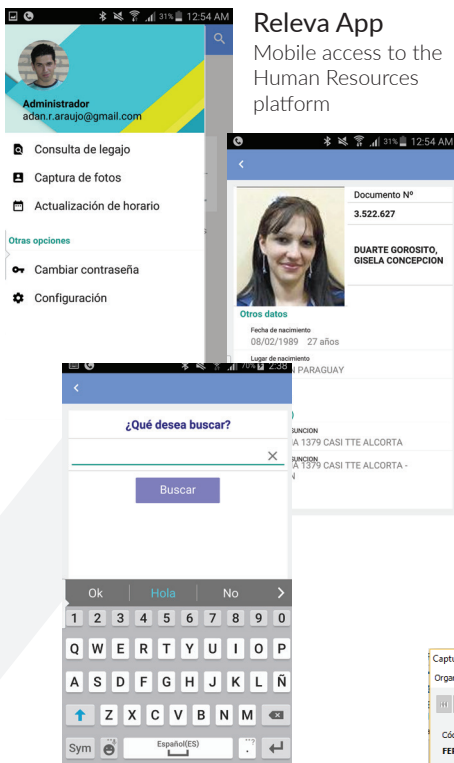

→ Access to the platform from anywhere

Data queries are available through the use of the browser since the system is completely Web, it only requires an Internet connection, and a valid user.

Hundreds of video tutorials available on YouTube, which simplify the process of staff training. Online manuals of each process and available module.

Integrated to biometric clocks, installed throughout the country, with a single platform for fingerprints and attendance records.

Application of legajos queries, assistance and documents, academic record, for smartphone.

SUCCESS STORIES

Ministry of Public Health and Social Welfare Salary Payments System

The department of Revolving, a dependency of the General Direction of Administration and Finances that is in charge of the processing of payments of wages, obligatory discounts by law such as contributions to retirements, diverse discounts of entities, associations, and mutual, as well as the payment of bonuses, and salaries for additional and extraordinary hours. This process involves about 3.8 billion guaraníes annually, considering hundreds of processes.

Another of the critical points solved was to allow officials to consult their assets online, using the self-service platform.

The update of the technological platform allowed to move from DBF files dispersed, with old DOS interfaces to a single database with RDBMS (Security and scalability) features, with a modern graphical interface and Web environment.

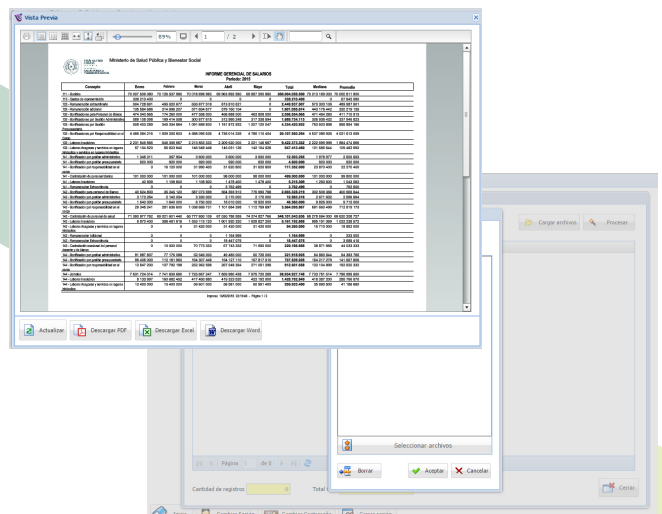

High rate of time involved in each task, with great possibilities of involuntary human errors.

Application response rate less than one second in records queries, and only minutes in generation of complex reports

Benefits achieved

- Less time involved in information processing
- Accuracy during information processing and in the issuance of reports
- Reliability, since the system is built using a database engine that has features of Security, Audit and Redundancy.
- Simple and centralized administration, avoiding maintaining multiple files and data sources that can provide inconsistent, confusing information and with the possibility of involuntary errors.

Access from anywhere through access of mobile devices such as Smartphone, and institutional website, avoiding queues and delays in the service, allowing convenience for the official.

Paraguay Customs

Protection of Documents through security labels

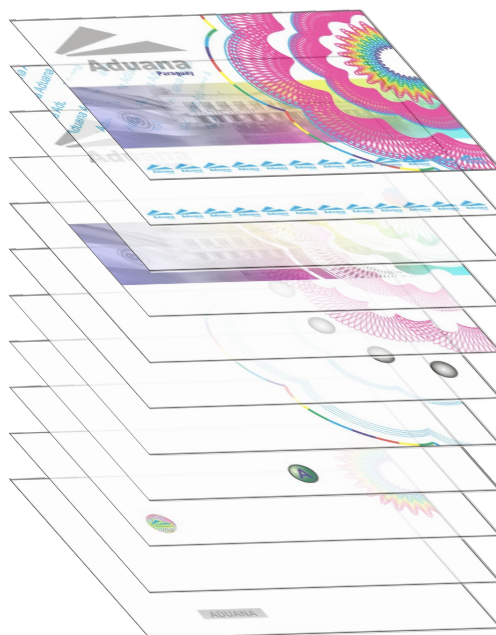

We have provided security labels for the protection and validation of documents, used in the Nationalization Certificates, these easy-to-use labels allow to avoid falsification of documents.

Our fully transparent labels that allow reading the content of the document, have extra thin layers (just measured in microns) of elements such as embedded photographs that get the color given to a certain position, 3D depth elements, logos and objects with effects fresnel, guilloches and complex lines, Microtexts, Hidden texts, complex lines of kinetic effect, and other elements that practically make impossible the duplication of these labels.

Final design with sequential number

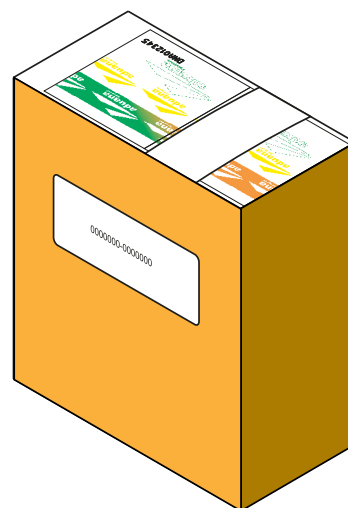

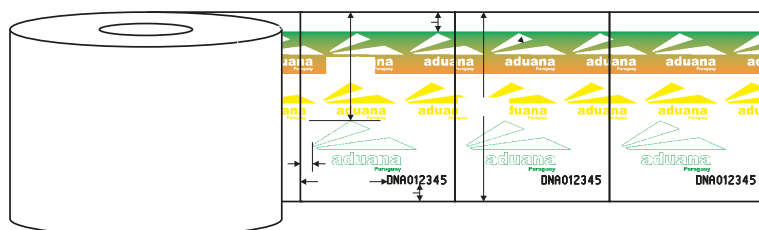

Elements superimposed in layers

The Tamper Evident Proof feature causes the tags to self-destruct upon tampering attempts, leaving a residue on the substrate containing the protected information.

The label box acts as a support for transport, and in turn has an internal mechanism that allows the labels to be easily issued and applied directly to the substrate, minimizing the risks of handling and loss due to poor application.

Center for Fluvial and Maritime Shipowners

Simulator of Navigation of Tugboats and Ship Motors

Navigation and maneuvering simulator, suitable for working as a navigation, radar and communications classroom. This simulator allows you to reproduce different scenarios that may arise during a trip, where the navigator must put into practice the theoretical knowledge acquired and evaluate the reaction to a situation presented in the simulator.

The navigator must correctly plan the passage in accordance with the relevant rules and recommendations, with the appropriate means, letters, navigation instructions, traffic separation schemes, mandatory reporting systems, among others. Nowadays the Paraguay - Paraná hydrovia constitutes the epicenter of the transport of merchandise of the region, therefore the continuous training of the personnel on board is fundamental for naval operations in the country considering that in the country operate some 2,600 barges, the third largest fleet only surpassed by China and the United States.

Navieras habilitan moderno simulador de navegación

28 DE ABRIL DE 2015

El Centro de Armadores Fluviales y Marítimos del Paraguay (Cafym) inauguró ayer un moderno simulador de navegación, el Transas NT 500. El equipo fue adquirido gracias a una inversión de USD 500.000 (G. 2.495 millones) que fue costeadada por los socios del gremio. Las autoridades del Cafym señalaron que con esta adquisición, la navegación paraguaya logra un importante salto cualitativo que será de utilidad para la capacitación profesional de sus trabajadores fluviales.

EN DESTAQUE

Compartir    

El Centro de Armadores Fluviales y Marítimos (Cafym), presentó el simulador de navegación Transas NTP en su versión 5.35, que servirá para el proceso de capacitación náutica de los tripulantes de la tercera flota fluvial a nivel mundial.

El equipo tiene una inversión de US\$ 375.000, a esto se le suma una orden por unos US\$ 55.000 para agregar a la nueva tecnología los comandos azimutales, que son algunos de los remolcadores que exigen otro tipo de configuración, que se instalarán en 30 días.

El simulador permite la reproducción de sensaciones físicas del entorno, y el comportamiento de equipos y máquinas que pretenden disimular lo que podría llegar a suceder en las embarcaciones.

Para simular las sensaciones físicas se recurren a complejos mecanismos mediante modelos matemáticos.
